

MURUGAN RAMAKRISHNAN

Senior Frontend Engineer | React.js | Next.js | React Native | TypeScript

murugan.ramakrishnan.tech@gmail.com | +91 8073114075 | Bengaluru, India | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Frontend engineer with 5+ years of professional experience, including 4+ years building production consumer and internal applications across React.js, Next.js and React Native in a shared TypeScript monorepo. Experienced in frontend architecture, performance engineering, offline-first mobile experiences, SSR/SEO, payments, media, internationalization and analytics-driven product development. Built and shipped features for Ninja Kisan, an agri-tech platform with 1M+ downloads and 600K MAU, including experiences delivered across 11 Indian languages.

TECHNICAL SKILLS

- **Core:** React.js, Next.js 14 (App Router, SSR, Route Handlers, JSON-LD/SEO), React Native, Expo Router, JavaScript ES6+ / TypeScript, Solito (cross-platform routing)
- **State & Data:** Zustand, MMKV (persisted offline state), React Query, REST/Axios, JSON Forms + AJV
- **UI & Performance:** Tamagui (design tokens, theming), FlashList, ECharts, SVG/Lottie animation, react-native-share
- **Platform & Tooling:** pnpm + Turborepo monorepo, Biome, i18next (11-locales i18n), Testsigma E2E, Firebase (Deep Linking, Crashlytics), PostHog
- **CI/CD:** Bitbucket Pipelines (166 PRs delivered through automated CI-gated code review), environment & build configuration for dev/live environments
- **Testing:** Cypress (E2E, component-level), Testsigma E2E, CI test instrumentation
- **Payments & Real-Time:** Razorpay checkout/payments, LiveKit real-time chat, offline-first architecture
- **AI-Assisted Engineering:** Cursor, Claude Code, GitHub Copilot, ChatGPT — AI-assisted feature development, debugging, refactoring, codebase analysis and documentation.

EXPERIENCE

Ninjacart (63Ideas Infolabs Pvt. Ltd.)

May 2022 – Jun 2026

SDE 1 | Bengaluru, India

Ninja Kisan — agri-tech consumer platform: pnpm/Turborepo monorepo (React Native + Next.js, 20+ shared packages, ~89% shared code); 1M+ downloads, 600K MAU, 10M+ daily video views

- **Owned** frontend features end to end — from requirement analysis and technical design through implementation, API integration, testing, deployment and production debugging — across consumer and internal platforms.

Web — React.js / Next.js

- **Built** and maintained reusable React.js component architecture — functional components, custom hooks, Context API and shared UI primitives — across multiple product surfaces.
- **Architected** server-rendered category, news and QnA content routes on Next.js 14 App Router (100+ routes) using React Server Components, with parallel/intercepted routes for modal URLs.
- **Implemented** schema.org JSON-LD structured data and canonical/hreflang metadata across 11 locales, enabling multilingual SEO indexing for content and QnA pages.
- **Engineered** a Next.js Route Handler (BFF) that server-side scrapes third-party article metadata, removing client-side CORS constraints from the news feed.
- **Delivered** one shared React component layer across web and native via Solito for unified cross-platform routing, and tuned per-route fetch caching (no-store/force-cache + tag revalidation) to balance freshness against origin load.

Mobile — React Native

- **Shipped** voice search for low-literacy users — locale-aware speech-to-text across 11 Indian languages with microphone permission gating, on both React Native and web.
- **Designed** the mobile navigation shell — 7-tab bottom navigation over Expo Router file-based routing (~80 routes) with platform-specific tab bar rendering.
- **Developed** a cross-platform audio player for vernacular news with separate native/web playback engines behind one interface, including position polling, lifecycle cleanup and listen-through analytics.
- **Drove** viewability-based impression tracking and video autoplay (>50% visibility threshold) across feed, shorts and carousel surfaces, powering ad impression measurement.

- **Built** resumable large-file video upload — a PeerTube resumable-session protocol (chunked reads via RNFS, HTTP 308 continuation handling, transcoding poll-to-publish) running inside an Android foreground service via a patched react-native-background-actions, with progress persisted in MMKV so uploads survive process death on flaky networks.
- **Migrated** high-volume feed/list surfaces to Shopify FlashList with tuned item-size configuration for smoother recycled-view scrolling; integrated Truecaller one-tap authentication into the login flow with backend-config-driven gating.

Payments, Real-Time & Reliability

- **Led** the cart-to-payment checkout flow end to end — Razorpay integration, order creation, payment status handling and transaction reconciliation.
- **Co-built** a LiveKit-powered real-time chat feature for interactive product experiences alongside the tech lead.
- **Implemented** Firebase deep linking for cross-surface navigation and Crashlytics for production crash monitoring and stability triage.
- **Contributed as** a primary contributor to the server-driven UI / adaptive card system that lets backend-controlled layouts and campaigns ship without app releases.

Platform, Personalization & Growth

- **Delivered** a farmer-facing product in 11 Indian languages with a platform-split i18n strategy — offline-capable bundled dictionaries on mobile, lazy-loaded namespaces on web — including runtime language switching.
- **Launched** the in-app advertising surface — banner, image and video ad cards across feed, QnA, profile and product pages — with click/impression instrumentation feeding revenue measurement.
- **Owned** the crop-preference personalization flow end to end (selection UI, create/update persistence, server prefill) across 8 merged iterations, driving personalized feed and advisory content.
- **Engineered** an offline-first state layer — MMKV-persisted Zustand stores for discovery, commerce and engagement domains within a 24-store shared layer — for reliable behavior under intermittent connectivity on low-end Android devices.
- **Instrumented** ~79 product analytics events into a centralized 562-event taxonomy, and established a 185-identifier testID convention across 102 components enabling automated Testsigma E2E regression in CI.
- **Mentored** 3+ engineers, contributed to code reviews and technical discussions, and coordinated sprint planning and task allocation for a 10+ engineer Agile team.

Omni Channel — Internal Operations Platform

- **Developed** a React.js internal operations platform for the operations team covering inventory, vehicle and driver management, and import/export tracking.
- **Delivered** sales order and purchase order creation, update and deletion workflows with integrated payment flows.
- **Built** a truck management module with route and payment estimation using the MapmyIndia API, integrating React Query with custom hooks for API calls and Zustand + Context for state management.

Masalabox Food Network

Apr 2021 – Apr 2022

Frontend Developer (Angular, Ionic) | Bengaluru, India

- **Developed** the customer-facing Angular food ordering and subscription platform — chef discovery, menus, ordering, subscription selection and delivery-date management.
- **Designed** role-based chef dashboards for order management, payment tracking, order history and menu management.
- **Built** an Ionic delivery app for delivery teams to view assigned orders and update order status, with reusable responsive components (Angular, TypeScript, SCSS) integrating REST APIs across web and mobile.

EDUCATION

B.Sc. Computer Science — Bangalore University
